CN Railway at Kukatush Siding on Radio Hill Property

## Railway Infrastructure

## Radio Hill Iron Ore Project

Historical\* resource estimates as high as 427 million tons of 27.3% iron (non NI 43-101 compliant) (Gerson, 1961)

Power, water, roads and rail on property

Historical metallurgical testing indicates potential for clean, high-grade concentrate (Glenn 1961)

## Recent News

February 2, 2012: Roger Walsh Appointed as Strategic Advisor

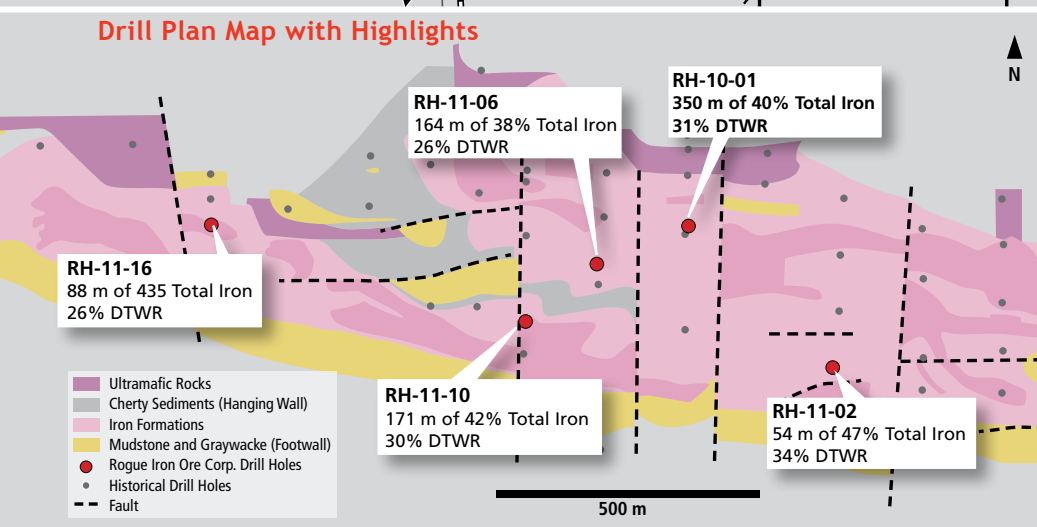

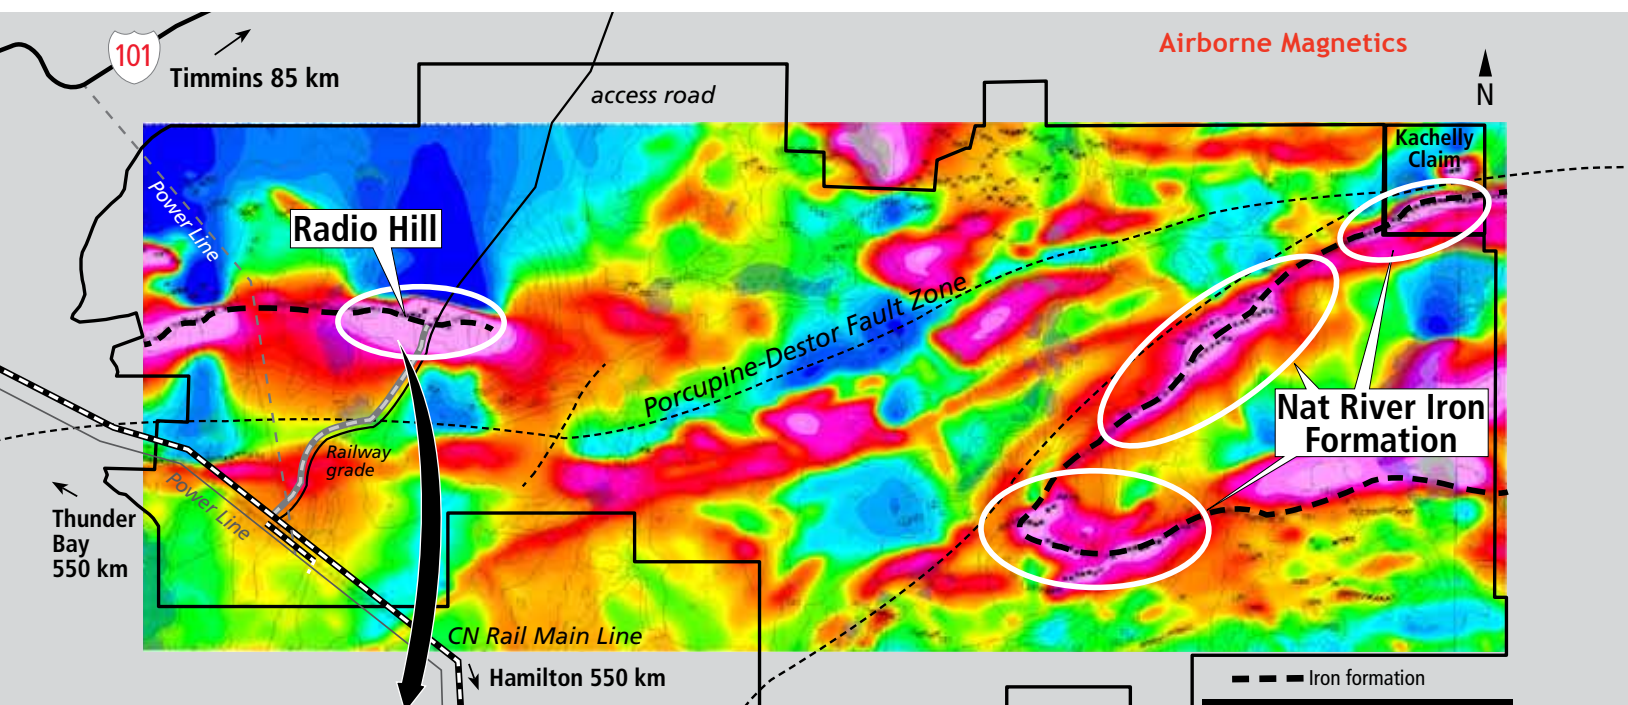

February 13, 2012: Drilling at Radio Hill Intersects 171 m of 42% Total Iron

February 21, 2012: Drilling at Radio Hill Intersects 150 m of 45% Total Iron

February 29, 2012: Metallurgical Testing Initiated

March 5, 2012: Drilling Intersects 354 m of 40% Total Iron

\* The historical estimates and feasibility values mentioned in this document are not in accordance with the mineral resources or mineral reserves classifications contained in the CIM Definition Standards on Mineral Resources and Mineral Reserves, as required by National Instrument 43-101 ("NI 43-101"). Accordingly, the Company is not treating these historical estimates as current mineral resources or mineral reserves as defined in NI 43-101 and such historical estimates should not be relied upon. A qualified person has not done sufficient work to date to classify the historical estimates as current mineral resources or mineral reserves. The term "ore" in this document is being used in a descriptive sense for historical accuracy, and is not to be misconstrued as representing current economic viability.

The Radio Hill Iron Ore project is located in a mining friendly jurisdiction of Canada near Timmins, Ontario. The existing infrastructure on the property is exceptional with all the amenities needed for large scale open pit mining. A CN Railway siding to accommodate exporting is already in place as well as power and road access. The project has had a significant amount of historical work which removes many of the risks associated with exploration. The project is owned 100% by the Company and there is no underlying NSR.

The 12,000 hectare land package also includes the relatively untested, 12 km long Nat River Iron Formation for which exploration plans are currently being prepared.

A 10,000 meter diamond drill program was initiated in Q3, 2011 on the historic Radio Hill resource with the objective of outlining an iron resource prior to the commencement of a prefeasibility study.
